

PROJECT

Deep Learning

1. Objective

The goal of this project is to select, design, and implement deep learning models as a solution for a particular task/problem.

2. What to Do

Dataset

- Select or build a dataset on any topic. You can use publicly available datasets, e.g., from Kaggle (<https://www.kaggle.com>) or Hugging Face (<https://huggingface.co>)
- Bonus points will be given if the data is related to Cambodia and/or if you construct your own dataset.

Machine Learning Models

- Propose at least two (2) deep learning models of your choice
- Train and evaluate the models using the dataset selected/constructed
- Conduct a comparative study of all proposed models (optionally you can also compare your models with the existing methods in the literature)
- Discuss the results obtained from your experiments

3. What to Submit

- Source code (well commented)
- Technical report (the template is provided, max 4 pages)

4. Key Dates

- Project Start Date: 18 Dec 2025
- Project Deadline: 01 Feb 2026
- Presentation Date: TBD
